

I drive truck for a living and use any and all traffic reports I can receive. XM Radio (Satellite) enables me to know two to three hours before I get into the Los Angeles area; the heavy traffic flows, accidents that block or close freeways. This permits me to change my route to my destination and avoid costly delays. Under the new hours of service rules, these delays cause a huge amount of stress that we drivers don't need. Getting traffic reports every few minutes that are clear and complete, by satellite, are a great deal better than receiving them every quarter or half hour via AM /FM, assuming you can keep up with changing stations to keep a clear signal. Please continue the traffic reports via satellite to not only help the many truck drivers continuously on the road, but to also help keep our roads safer.
